ODD TRICK BILLIARDS Some of the New Shots Made by

Exports. TRADE'S QUEER FACTS.

Making of Billiard-Balls Causing the Extermination of the Elephant. Where Materials for a Billiard Outfit Come From.

(Written for the Dispatch.)

Trick billiards is becoming a more popular pasttime each year, and there are dozens of men touring the country today who are making fat incomes by their ability to make the small ivory spheres do the most extraordinary

When the bumble origin of the scientific game is called to mind, these tricks become all the more wonderful. The present game is really the outcome of a child's toy. 'The children of many centuries ago amused themselves by a small scaffording, shaped somewhat like a gallows, and fitted with a slate. A ball was attached to the slate, and the game consisted in knocking over a pin fashioned somewhat like a small nine-pin.

Subsequent elaborations of this toy brought about a crude table, and the game attained the dignity of rolling one ball with the hand, so that it would re- rest; otherwise an imperfect ball will be ball with the hand, so that it would rebound from a second ball to a third. It
was a long time after this before a cue
was thought of, and sovernliater generations contented themselves with this
play, until some master-mind conceived
the idea of clastic cushions. This caused
the find revolution of the game, and the idea of clastic cushions. This caused the final revolution of the game, and made it possible to perfect it to its pres-

Looking at billiards from a commercial standpoint, it has become one of the most unique of the dustrial world.

concern sometimes has \$100,000 tied up in managany logs all the time.

ODD FACTS ABOUT THE TABLE. There is a deal of work about a fine billiard-table of which the ordinary player of the game knows nothing. The less are all band-carred, and only the legs are all hand-carved, and only the most expert men in the craft are employed

The slats used for the bed of the must be carefully selected, and made as true as the most delicate piece of machinery. In the average table there are two thousand pounds of this slate, which is used in slats of to pounds each. Five two thousand points of this siate, which is used in slabs of to pounds each. Five slabs are generally used. The best rubber for the cushons is that grown in the most isolated parts of Para, near the mouth of the Amezon. Where these caoutchout trees grow the climate is mest deadly, owing to the malarious character of the soil, and the natives can only be induced to collect the rubber by very high wares for that country.

induced to collect the rusher by very high wages for that country.

Woods from all parts of the world are used in the making of the cues, but the average cue is made of carefully-seasoned ash, fitted into an ebony handle. The cue appears to be a simply made instrument, but there are so few really good ones made that when a professional player comes across one hundreds of dellars would not induce him to part with it Players become attached to a cue like a IT KILLS OFF ELEPHANTS.

IT KILLS OFF ELEPHANTS.

The greatest science and skill is required in the making of the balls. It is not generally recognized that the game of billiards is slowly, but surely accomplishing the obliteration of the elephant in his wild and native shape Hundreds and thousands of elephants are killed annually in Africa and Asia for the ivery of their tusks. Only ten billiard balls can be made from the two tusks of a full-prown elephant.

There are about 2.49 billiard balls sold each month by the great dealers to the smaller dealers. This in itself represents the ivery from 240 elephants. Multiply that by twelve and it is easy to see the inroads made annually upon the elephant species.

phant species.

There are not more than a dozen large

There are not more than a dozen large makers of billiard balls the world over and each one of these firms is tooking for the day when ivory will no longer be on the public market. They are all accumulating a large reserve stock, and it is said in the trade that one New York concern has a surplus stock of 15,000 balls with a market value to-day of close to \$70,000. Ten years from now this close to \$70,000. Ten years from now this concern expects that this reserve will be

Within the past fifty years the price

A DIFFICULT SHOT.

set to-day costs between \$25 and \$30, while a half century ago they could be bought for one-sixth of that sum. Much of the increase has occurred during the past decade and the values are steadily

going up.
RARE SCIENCE IN TURNING THE
BALLS. The men who make the balls must be expert judges of ivory. There are only certain portions of the tuck which can be used, and it is necessary to avoid the

A FINE DRAW.

part of an ounce more or less. NEW TRICK SHOTS.

Some of the newest trick-shots are shown in the accompanying illustrations. The bottle trick is an exceedingly diffi-cult one ify a quick and bard twist of the wrist, the cue-ball, after striking the object-ball, jumps into the air, and from the effects of the "English" put on it, swerves against the ball on the top of the bottle, knocking it off. The old-fish ioned way of doing this trick was to make the cue ball tall into an upturned fait, and white it was a very hard shot, the bettle-shot is much more difficult.

Another most difficult shot is shown in the cut, where five balls are placed in a row at the head of the table, the cueball being searest the cushion. In this shot, a masse, the cue-ball bits the hall nearest the side cushion, and then makes a arries of mathematically-perfect semi-circles, striking each of the remaining four balls and the cualion alternately. Not one trick billiard-player out of a hundred can do this shot.

A fine draw-shot is shown in the third cut. The cue-ball, after striking the object ball rolls up the incline and falls into the hat. the wrist, the cue-ball, after striking the

The First Sewing-Machines.

(Chambers's Journal.)
A London cabinet-maker, called Thoma Saint, in or about 170, took out a patent for a muchine for sawing leather, or rather, for "quilting, stitching, and All quarters of the globe have to be searched for the necessary material for a first-class outfit, while the skelled labor it employs carns millions in wages yearly.

All of the fine tables are made of the highest grade of mahogany, that coming from Honderas. Mexico, and Cuba being the best for the purpose. It is purchased in square logs, which are kept in store for six r oight years before they can properly be used.

A large billiard-table manufacturing concern semetimes has \$100.000 tied up in the first conduct seven and the first conduct seven and the first conduction of the semination of the semination of the semination of the semination of the conduction with leather, for "quilting, stitching, and making shoes, boots, splatterdashes, clogs and other articles." This patent, unfortunately, was taken out along with other inventions in connection with leather, for "quilting, stitching, and making shoes, boots, splatterdashes, clogs and other articles." This patent, unfortunately, was taken out along with other inventions in connection with leather, for "quilting, stitching, and making shoes, boots, splatterdashes, clogs and other articles." This patent, unfortunately, was taken out along with other inventions in connection with leather, for "quilting, stitching, and making shoes, boots, splatterdashes, clogs and other articles." This patent, unfortunately, was taken out along with other inventions in connection with leather, for "quilting, stitching, and making shoes, boots, splatterdashes, clogs and other articles." This patent, unfortunately, was taken out along with other inventions in connection with leather, for "quilting, stitching, and making shoes, boots, splatterdashes, clogs and other articles." This patent, unfortunately, was taken out along with other inventions in connection with leather, for "quilting, stitching, and making shoes, boots, splatterdashes, clogs and other articles." This patent, unfortunately beautiful that the patent, and the patent, of "the patent, or "quilting, stitching, and the stitch" principle. Rude as it was is declared by experts to have anticip of whom, however, could in all human probability have as much as heard of Saint's machine. This is not the lear curious incident in the history of the

In Saint's machine the features at

In Saint's machine the features are the overhanging arm, which is the characteristic of many modern machines; the perpendicular action of the Singer mechine; the eye-pointed needle of the Howe machine; the pressure surfaces peculiar to the Howe machine; and a "feed system equal to that of the most modern inventions. Whether Saint's machine was ever worked in a practice chine was ever worked in a practice workshop or not. It was unquestionably a practicable machine, constructed by the specific of the practical in the practical by the specific or the late of the specific or the invention of Earthelmy Thimonnier of St. Etienne, who is claimed in France as the inventor of the sewing the specific or the inventor of the sewing the specific or the inventor of the sewing the specific or the specific France as the inventor of the sewing machine. In 1830 Thin.cnnier constructed machine, principally of wood, with an irrangement of barbed Reedles, for stitching gloves, and in the following years to began business in Paris, with a partner, as an army clother. The firm of Thimonnier, Petit & Co., however, do not thrive, because the ouvriers hough they say in the principal's machine in not thrive, because the ouvriers hough they saw in the principal's machine a matrument destined to ruin them; much as the Luddites viewed steam machine; in the cotion districts of England. At dea of that sort rapidly germinates heat, and Thimonnier's workshowns one day invaded by an angry mount of the state of the same and compelled the inventor to seek safety it flight. Poor Thimonnier was absent from Parts for three years, but it is flight. Poor Thimonnier was assert from Parts for three years, but it is returned, with another and more perfect machine. This was so coldly received both by employers and workinen in the tailoring trade, that he left the capital journeying through France and, journeying through France will his machine, pald his way by exhibiting it in the towns and villages as a curl osity. After a few years, however, Thi monnier fell in with a caritalist, wh believed in him and his machine, and

monnier tell in with a calmine, and was willing to stake money or both partnership was entered into for the manufacture and sale of the machine, and all promised well for the new firm, when the Revolution of 1848 broke out, stopped the business, and ruined both the inventor and the capitalist. Thimonnier died in 1857, in a poorhouse of a broken heart.

This French machine was also on the chain-stitch principle, but it was forty years later than Saint's. In between the two came, about 1852, one Walter, Hunt, of New York, who is said to have constructed a sewing-machine with he lock-stitch movement. Some uncertainty surrounds this claim and E. Howe is the person usually credited with How is the person usually credited with this important, indeed, invaluable, in-vention.

NEW LUNCH COUNTER

BILL GOSSETTE EXPATIATES ON HIS CONCOCTED SCHEME.

Difference Between Anticipation and Renlization in Political Matters-The Unique Club Has Its Final Meeting.

The Ashburner-Gossette Restaurant Company is being talked about a great deal, and several millionaires have written us asking how soon stock will be put on the market, as they are anxious to The scheme is without doubt the most novel ever presented to the gullible public, and there is no doubt that Charlie and I will soon be rich. We were very anxious, indeed, to get the arrangements completed by the time the big fair opened last week, but we were delayed in the matter by the Jefferson managers, who in turn were delayed by the non-arrival of a lot of goods from several houses, who were unable to fill their orders on account of a strike among their employees, because they wanted to run their own business. Among the communications received relative to this celebrated 10-cent Jeffersonian-Aroma lunch-counter was one from Mr. Robert Pitzoid, of Manchester. Bob is a bang-up, all round good fellow. He wanted to know if a pipe could not be run from the Jefferson to his place and establish to know if a pipe could not be run from
the Jefferson to his piace and establish
a branch Ashburner-Gossette lunch-couner there. He is confident that it
will pay, and makes the statement that
there is not a lunch establishment in the
city. He tells a rather good thing in
this connection. A few days ago a genteman who runs a farm in Powha an
came to Richmond and sold a load of
wheat. On his return he falled to get
ans dinner before leaving the city, thinking that he could get a lunch in Manohester. When the farmer arrived in
iniat city and began looking around for
an eating-house, and could find no sign
of one, and he began to realize the lone
someness of his morning meal, his angry
passions filled up the vacuum. He called
at Bob's place and got a Bill Gossette
Perfecto cigar, but even this soothing
ione did not quiet him. Pulling his coat
off, he exclaimed, in a volce that shook
the chandeliers; "I will not honor your
town by wearing my coat, and will walk the chandellers; "I will not honor your town by wearing my coat, and will walk ap your old a reets in my shirt-sleeves rou are no as near up to date as Powniatan Courthouse. Talk about being aniexed to Richmond! Better get yourself joined onto a restaurant of some kind," and, poking his pants in his boots, and with coat on his arm, he ambled up Hulls reet. It is very likely we will establish the branch place over there, for, if this be true, it surely ought to pay.

Politics is a mighty singular thing:
At first blush that don't sound like good
grammar, but it is. Politics is a nounsingular number, and usually in the possessive case—that is, a fellow who goes
into politics usually comes out of it without anything left but a sad experience.
Leastwise, that was my experience,
though I confess I wasn't quite so
much into politics as the politicians were
into me. But, as to experience, I
am heaping up and running over. Just
of my warmest supporters called to see
me, and stated that the outlook was not of my warmest supporters called to see me, and stated that the outlook was not so encouraging as it was before I consented to the use of my name for senator from the Sixteenth District. These "warm friends" knew that my cash was about all gone, and that only a few more Bill Gorsette Perfectos remained in the box. I was advised to remain away from the convention, and that my riends would stir up turmoil with the iclegates pledged to the other candidates, and I would be run in as a dark horse. The turmoil was stirred up, but rom what I afterwards heard, it was in my friends, and not the delegates. From the reports that came to me, turmoil was not the only thing stirred up. The orative of the convention was too full for utterlines, and there were actually people at was lightly how. I was liven. nc, and there were actually people at that meeting who didn't know I was liv-ie. Colonel William W. Baker, my ampaign adviser, got mixed up in some way with some one in the head of my forces. This was not at the head of my forces. This was not at the head of my forces. This
n a large measure is accountable for
my defeat. William says Tom would not
et him go out at night, and, as dark
leeds love darkness, it is impossible to
work politics successfully during sunlight. ny way, I have had my experience, and know a lot, and in future I will devote my time to the restaurant business.

I attended the meeting of the Unique Club held last week, and had the mortination of seeing the organization disordanize. A little soler thought and palence and a great deal of temper and magining smartness, and the average seeting of club members is summed up. A few members who know a little bit, and a large number who regard themelyes as walking encyclopedias, and you and a large number who regard them-elves as walking encyclopedias, and you ave the roster of the organization. The inique Club was no exception, and the and of Henridicts have disbanded, while and of Henricis have disbanded, while istory repeats itsef, and old Father lime grinds the calenders out and in, it happe ou thusly: Mr. John Wattington, in ex-member, dropped in on the meeting, leveral new names were proposed for memoership, among them Rev. R. H. Winfree and Mr. J. B. Watkins. The proposal of these two names quickly crought Mr. John Wattington to his feet though he had no right to speak), with brought Mr. John Watlington to his feet though he had no right to speak, with 1 few red-hot remarks to the effect hat if these gentlemen were allowed to join the lub, he, too, was eligible to membership. It will be remembered that Mr. Watlington was a former president of the club, but was recently compelled to resign on account of one of the rules of the organization. Nearly every member of the club ook part in the discussion, and se eral facticulis were narrowly averted. Dick Carrington had to get in between Bill Webb and Clinton Broaddus, and in doing so lost the siewe of his seersucker coat. Webb and Clinton Broaddus, and in doing so lost the sleeve of his secretarcher coal. He remarked afterwards that he'd as leave have it that way as any other, as the summer was over, but that he hated to see a suckin' in such condition. He was fined \$60, and made to sing six veries from the song, "My Little Boy's Pants Need Patching." for making use of the remark. President D. B. Winfree broke several planks in the table rapping for order, which he failed to obtain, and the meeting and cub broke up in great disorter. Dr. Wood had a splendid paper on 'Train up a boy in the way he should go, and when he is old he will not play on accordions or mouth-harps," but he was not given an opportunity to was not given an opportunity to BILL GOSSETTE.

Church Cars on Siberian Railway.

(San Francisco Examiner.)

L. K. Minnock, the representative of several large English roling-mills, who has sold a vast quantity of rails to the used in the construction of the great Siberian railroad, is in the city on a pleasure trip. The entire length of the road from St. Petersburg to Viadivostock is to be 6,00 miles. There remain 3,700 miles yet to be constructed. Mr. Minnock stated that the authorities of the Greek Church had, with the approval of the Russian Government, decided upon a novel means of spreading the religion of the Church through the sparsely populated portions of Siberia that the road has already penetrated. There are long stretches of territory in which there are hardly any people whatever, so the building of churches is out of the question. The authorities, he says, finally decided to construct some churches on wheels, that would be hauled over the road and stopped for religious exercises wherever a handful of people was found. Five of these church-cars have been constructed, each one being consigned to a certain section of the railroad, and they are hauled back and forth between the scattered small settlements. Each of them, he says, is fitted up with all the paraphernalla of an orthodox Greek church, and two priests ere in each car. All told, (San Francisco Examiner.) L. K. Minnock, the representative of

the five churches on wheels, he thinks, visit seventy settlements a week. Each settlement knows when the church-car is to arrive, and all the people are expected to come down to meet it promptly for the services held in the car immediately after its arrival. Each church can comfortably seat thirty or forty people, and two settlements are visited daily by each one. Several settlements have more people that the church-car can accommodate, and in such cases the cars make longer stops to hold two, and sometimes three, services before departing.
